

TECHNIDATA confirms its commitment to the field of biobanking and announces the launch of www.biobank-solutions.com

Montbonnot, 7 July 2014

TECHNIDATA, supplier of software solutions for clinical laboratories and biobanks, confirms its commitment to the field of biobanking and announces the launch of www.biobank-solutions.com. This website is dedicated to the biobanking sector and TD-Biobank's response to the needs of biobanking professionals.

A dedicated solution for the challenges faced by biological resource centers

TD-Biobank is designed for the specific needs of biobanks, which want to value and promote their biological resources and collections for research, diagnosis, and donation.

It offers full traceability and optimizes the management and storage of specimens in a multisite environment or on a network. It adds value to clinical and biological data, while contributing to the accreditation process for ISO 15189.

"TD-Biobank is the result of close collaboration with professional stakeholders, such as biobank managers, technicians, quality controllers, and IT services. We listen closely to their feedback, which is essential for improving our software," says Christophe GUITART ARNAU, Product Manager at TECHNIDATA.

Promoting discussion and sharing experiences

"The www.biobank-solutions.com website continues this process of collaboration. Like TD-Biobank Club and User Meetings, set up to structure exchanges with TECHNIDATA and between users, this website encourages users to share experiences.

This website therefore provides user testimonials and TD-Biobank contributions are presented from the user's perspective. A discussion forum will soon complete the web platform, bringing more exchange and dialogue," says Christophe GUITART ARNAU.

Personalized medicine and biobanks

The growth of personalized medicine opens new perspectives and changes the interaction between disciplines. Genetics and Pathology are developing side-by-side, and the need to store and manage biological resources is increasing.

"Personalized medicine greatly accelerates the development of biobanks. Being an historic and pioneering leader in the field gives TECHNIDATA a competitive advantage, to the extent that we have developed a solid expertise. Not only can we respond immediately to needs, from the simplest to the most complex, help meet quality requirements, add value to collections, and assist with interoperability and networking, but we can also accompany biobanks to meet the challenges of tomorrow," says Christophe GUITART ARNAU.
